

verot.net - Scripts

[scripts.htm](#)

You can find here a list of script, mostly in bash, that I have created for my personal use. They are scripts for my desktop and laptop, and are all for (Ubuntu) Linux. They may be useful to you...

Thinkpad anti-theft system

A cool script which explains [how to set up an alarm system for Thinkpad laptops, using the laptop's accelerometer, hdaps and python](#).

Spamassassin remote filtering and KMail

A [page explaining how to setup Spamassassin to remotely filter spam, and trigger KMail to update its cached IMAP accounts via D-Bus/DCOP](#).

Using *tmpfs* with Firefox

A solution to [store Firefox's profile in RAM](#) in order to speed up browsing experience.

Google language

You want to reset Google search results to be from google.com when searching from a non-US IP, and not from the local Google site? [See a solution here](#).

aMule remote monitoring

And another bash script to [monitoring aMule remotely](#).

OzForces usage meter

A little [script to check your usage](#) (upload and download) if your ADSL provider is OzForces (Australia).

Warning!

Note that I offer no warranty whatsoever for these scripts, and some of them may be quite old by now. Use at your own risk!
